GT Movies Store - Demo Guide

Step-by-step walkthrough covering all 21 user stories

Before you start

- XAMPP **manager-osx**: MySQL Database is running (green).
- Django server is running: `python3 manage.py runserver` then open http://127.0.0.1:8000/
- Open two browser windows: **Window A** (normal) for the admin **kylezhou**, and **Window B** (Incognito, Cmd+Shift+N) for a brand-new regular user. Django keeps one login per browser session, and story 21 needs two different users because the Report button only appears on *other people's* reviews.
- Have an image file (any .jpg) ready for creating a movie in the admin.

Part 1 - Regular user (Window B, Incognito)

#	Step	Story
1	Open http://127.0.0.1:8000/ and click **About**.	1
2	Click **Sign Up** and create **demouser**. You are sent to the login page.	2
3	**Log in** as demouser. The navbar now shows Orders and Logout.	3
4	Click **Movies** to show the full list.	4
5	Type part of a title (e.g. "mem") and click **Search**. Only the matches show.	5
6	Click a movie to show its description, price, and image.	13
7	Scroll to **Reviews** and note that reviews are listed.	12
8	Write a review and submit it.	8
9	Click **Edit**, change the text, and save.	10
10	Click **Delete** on it, then write another review so one stays on the page.	11
11	Set quantity to **2** and click **Add to cart**. Add a second movie too.	7
12	Open **Cart** to show the items, quantities, and total.	6
13	Click **Remove all movies from Cart**. The cart is now empty.	9
14	Add a movie again, go to Cart, and click **Purchase** to get the confirmation page.	sets up 14 & 20
15	Click **Orders** to show the order with its date, total, and items.	14

Part 2 - Reporting a review (both windows)

#	Step	Story
16	**Window A:** log in as kylezhou and post a review on the same movie.	
17	**Window B:** refresh that movie page. kylezhou's review has a **Report** button instead of Edit/Delete.	
18	Click **Report** and confirm. The review disappears from the page.	21

Part 3 - Admin (Window A, http://127.0.0.1:8000/admin/)

#	Step	Story
19	**Users**: show demouser in the list, click **Add user** to create one, edit it (e.g. add an email), then **delete** it.	17
20	**Movies**: use the search box, **Add movie** (name, price, description, image), edit its price, then delete it.	18
21	**Reviews**: use the **is_reported** filter on the right to find the review from step 18. Untick *Is reported* and save, and it reappears on the site. Then create a review here and delete one.	19
22	**Orders**: open demouser's order and change its total. Show **Items** too. Create an order, then delete one.	20

Part 4 - Browser and responsive layout

#	Step	Story
23	Open the site in a second browser (Safari *and* Chrome). It is a normal web app with nothing to install.	15
24	In Chrome press **Option+Cmd+I**, then **Shift+Cmd+M** (device toolbar), and pick an iPhone or iPad. The navbar collapses to a hamburger menu and the movie cards stack. You can also just drag the window narrower.	16

Tips

- Forgot the admin password? Run `python3 manage.py changepassword kylezhou`.
- Do a full practice run first, then delete test data in the admin. Deleting a user also deletes their reviews and orders.
- If asked why you cannot report your own review: that is intended. Users can only report other people's reviews.
